Lund, August 31, 2011

Guests are offered mobile keys and automatic check in and check out at SkiStar

During the 2012 ski season, Zaplox and SkiStar will perform the biggest test ever of mobile keys at one of SkiStars facilities in Sälen, Sweden. A total of more than 5000 guest nights will be spent in apartments where Zaplox system is installed and where the guests mobile phones will be used to handle check in, check out and door locks.

SkiStar owns and operates a number of alpine facilities in Sweden and the test will be conducted at their latest premium facility – SkiLodge Village in Sälen. The key system will be supplied by Zaplox and it´s the company's first pilot installation.

Before departure the guests download a personal Zaplox key to his mobile phone, and upon arrival in Sälen he access his apartment directly instead of waiting in line for check-in. This is taken care of automatically and the door opens with a mobile app. When the holiday is over and it's time to go home, you check out with the Zaplox app.

The system will be in place when the season starts in December. A traditional, Swedish lock manufacturer produces the mechanisms of the doors.

Zaplox Mobile Keys are available for download at Windows Marketplace, Android Market, BlackBerry App World (spring 2012), and Apple's App Store.

About Zaplox

Zaplox was founded in 2010 in Lund, Sweden, and has developed systems for managing locks with your mobile phone. Zaplox use innovative technology and develops new services to create unique customer value in an old industry. Zaplox offer companies all over the world the possibility to streamline key management and to create new services and processes their own business through the use of mobile keys. Mobile Key Systems from Zaplox can be installed at hotels, offices and private homes. Zaplox' ambition is to lead the development of the mobile key industry.

Zaplox mission: "We will liberate the world from physical keys and enable a more simple everyday life"

About Zaplox Mobile Key System

Zaplox Systems works with all types of mobile phones and with all telecom operators. The system is available all day, every day all year around and can be managed on remote. The keys are accessed through a mobile application that is available for download at Windows Marketplace, Android Market, Blackberry App World (spring 2012) and Apple's App Store. Integration with customer's existing systems is handled through Zaplox' API and separate user interfaces for users and system administrators. Communication between locks and a local Key Manager is transferred through wire connection or wireless through Bluetooth or Zigbee. Zaplox System can be used parallel with key cards, tags and physical keys.
